

3061i and 3561i

More than meets the eye.

The A3 Mono Multifunctional Systems 3061i and 3561i are powerful solutions. In addition to the rapid output speed of 30 to 35 pages per minute, the optional original feeders ensure the highest level of productivity. For example, the dual scanner can process up to 160 image pages per minute with double-sided originals. The systems feature a large, 9-inch (22.86 cm diagonal) intuitive colour touch display that you can adapt to suit your requirements.

Both systems can process different paper weights and types from up to five different feed sources*. Numerous functions and options are designed to simplify use. These systems allow you to scan documents to create searchable PDF files*, making it easy to integrate scanned texts into existing documents.

What you can expect:

Vastly expandable: Thanks to the HyPAS interface, you can easily introduce optional software solutions into the MFPs for additional scanning, productivity, security and archiving functions. You can also introduce your own customised software*. Accessing the system functions via a smartphone or tablet isn't a problem either using our free Mobile Print app or the Apple AirPrint protocol. You can even scan documents into the cloud. A standard 32 GB SSD or an optional 320 GB hard drive are available to support a number of different job memory functions.

Maximum security: The 'Private Printing' function ensures that print jobs can only be started directly on the system by authorised persons. To start the printing process, you must enter an individual PIN or code card. This means that confidential documents actually remain confidential. Last but not least, the Data Security Kit* ensures that the data on the optional hard drive is properly encrypted and then deleted after use.

Unbelievable flexibility: The 3061i and 3561i are highly flexible and offer impressive opportunities for expansion*. The system can access up to 4,100 sheets (when using the optional paper cassettes*). Using an external finisher* the systems can staple up to 65 sheets and then process them using the punch unit*. The finisher with multi-tray* neatly files and sorts the output sheets in up to seven trays.

Good for the environment: The systems have been developed in accordance with the latest environmental standards for energy efficiency. This can be seen in the systems' low energy consumption values. The systems utilise resources effectively, making them highly environmentally friendly. For example, the machines automatically detect and remove blank pages, saving on paper.
