Our A3 multifunctional systems are your ideal partners for intelligent, efficient and future-oriented office work. Find out how seamless integration into cloud-based applications, first-class print quality and user-friendly operation can take your workflows to a whole new level. The 4009ci, 5009ci, 6009ci and 7009ci product ranges offer print and copy speeds from 40, 50, 60 up to 70 A4 pages per minute, in colour or black and white. These systems increase productivity in all working environments thanks to their flexibility, fast print speeds and ability to efficiently manage large print jobs.

What you can expect:

INTELLIGENT CONNECTIVITY: All systems can be easily integrated into common cloud platforms – from Google Drive to Microsoft SharePoint. This means you can access your documents seamlessly at any time, whether from your office or home office. Document Guard can prevent confidential documents from being scanned or copied – of course, only you decide exactly what and how!

OPTIMISED PRODUCTIVITY: If you are looking for professional high-speed digitisation, we recommend the dual scanner with ultrasonic sensor*, which processes up to 274 image pages per minute at 300 dpi. Not only does the scanning unit detect whether multiple originals are being fed at the same time, and stop the scanning process, it also protects the documents with integrated staple detection*. Speaking of detection, the print resolution of images can be optimised and reproduced in brilliant quality using AI and the Super Resolution Imaging print function.

EFFICIENT SYSTEM MANAGEMENT: The energy consumption of the multifunctional colour systems can be displayed and monitored on the 10.1-inch touchscreen, helping users better understand and manage system usage. To minimize waiting times, a motion sensor controls the multifunction system's power-on function, allowing you to make your daily work more efficient. Additional functions such as EcoPrint, duplex printing and automatic skipping of blank pages can help reduce toner and paper usage in everyday operation.

COMPLIANT SECURITY: Comprehensive hardware protection of the hard drives guarantees that your data is overwritten and encrypted multiple times. The ‘Secure Boot’ function ensures that only authorised firmware is executed during each start-up. During operation, the ‘Run Time Integrity Check’ regularly verifies the validity of the firmware. This way, our systems ensure that your data is protected at all times and that malware is successfully repelled.
